

Protection Panels

Key Features

- High density panels save rack space
- The patented Emerson silo protector block improves attenuation, cross talk and insulation resistance
- Connectorized and non-connectorized versions are available
- Gold-plated protector module sockets provide superior electrical contact and eliminate noise problems

Protect sensitive electronic equipment from overvoltages in central office, building entrance and remote terminal applications.

Description

Protection panels protect sensitive electronic equipment from overvoltages in indoor racks and outdoor remote terminals. These front access protection panels are configured for industry standard 5-pin protector modules (sold separately). Connectorized and non connectorized versions are available for installation on 19-in. or 23-in. racks.

Application

Protector panels are used in central office, building entrance and remote terminal applications and can be rack mounted to protect personnel and equipment from abnormal voltages and currents (ie., lightning strikes, on incoming cable pairs).

Note: Other protection panels, as well as connectorized and non-connectorized custom configurations can be provided. Call Emerson for additional information.

PROT23100NW

Ordering Information – Connectorized

Catalog Number	Part Number	◀ Equipment Side ▶		◀ Field Side ▶		Figure Number
